

The KSB breaker series, for excavators from 0,5t/1100lbs - 12,5t/27500lbs, benefits from a distinctive 'monobloc' design, manufactured in a single piece and without any tie rods - a feature that makes the structure extremely durable and resistant to leverage during operation.

- ▷ **More force and less vibration and maintenance:** inertial nitrogen energy recovery gives more power and less vibration thanks to nitrogen chamber (no internal diaphragms), reducing maintenance costs.
- ▷ **Long-lasting nitrogen:** traditionally, breakers with nitrogen energy recovery require frequent recharges - but with the new KSB-range's special sealing system, the charge-life can be increased by up to 300%.
- ▷ **Protected tubes:** tubes are completely protected through the casing and are suitable for all types of excavation, especially in narrow spaces.
- ▷ **Hydraulic system for blank firing:** a regenerative oil circuit that avoids blank firing when the tool is not in contact with the rock.
